

# Get Veterans Back on Their Feet

## Accelerate the Diabetic Foot Ulcer Healing Process Using dermaPACE®

dermaPACE®

**The dermaPACE System is a powerful game changer for clinicians treating veterans with chronic diabetic foot ulcers. It allows you to supercharge your treatment plan, provide an extra layer of care, and enhance the limited time you have with your patient.**

Treating veterans with chronic diabetic foot ulcers can be time-consuming and challenging. Oftentimes, current protocol does not result in wound healing, and multiple office visits are not realistic for your patients.

Heal wounds faster with energy first using the dermaPACE® System and its novel shockwave technology to improve healing times, patient outcomes, and quality of life.

### What Is dermaPACE?

The dermaPACE System is a fast, noninvasive shockwave system that works in conjunction with standard of care by using energy to stimulate healing in your patients with advanced stage diabetic foot ulcers during their routine visits to your office.

The dermaPACE System is an advanced wound care product that utilizes Pulsed Acoustic Cellular Expression (PACE®), a proprietary form of focused shockwaves that are applied on top of the wound bed and periwound area. The dermaPACE System is the only focused shockwave system cleared by the FDA in the U.S. for the treatment of diabetic foot ulcers (DFUs).

### Mechanism of Action

- Increased blood flow and tissue perfusion
- Inflammation modulation
- Protein signaling and growth factor upregulation
- Angiogenesis
- Tissue regeneration and wound epithelialization

## Benefits of dermaPACE

Stimulates blood perfusion two to eight hours after treatment

Can be utilized during your patient's once-a-week visit to the VA; does not require an additional appointment

Fast and easy to use

Any trained healthcare professional can operate under a physician's care

Promotes faster healing

Decreases complication and amputation rates

Clinically proven to be safe and effective

Average treatment only takes three to five minutes

The mobile unit seamlessly fits within your office and clinic workflows

Cost-effective – only \$55 per treatment

The dermaPACE System is clinically proven to contribute to improved patient outcomes by providing a convenient, fast, and seamless therapy that reduces the time to heal and increases the patient's quality of life.

## Who Is a Good Candidate for dermaPACE?

Veterans presenting with chronic advanced stage diabetic foot ulcers that have not responded to standard of care within the previous 30 days are considered good candidates for treatment with the dermaPACE System. Other clinical indications for use include:

- Less than 50% wound area reduction with standard of care
- Full-thickness diabetic foot ulcers
- Wound area no larger than 16 cm<sup>2</sup>
- Wagner ulcer grade 1 or 2, stage A
- Adults 22 years and older

Please refer to the Instructions for Use for additional information.
